

# Inserting Video into SMART Notebook 10

SMART Notebook 10 has the capability to embed flash video files directly onto the Notebook page. First you will need a video file. There are several places to download videos on the Internet. Here are just a few:

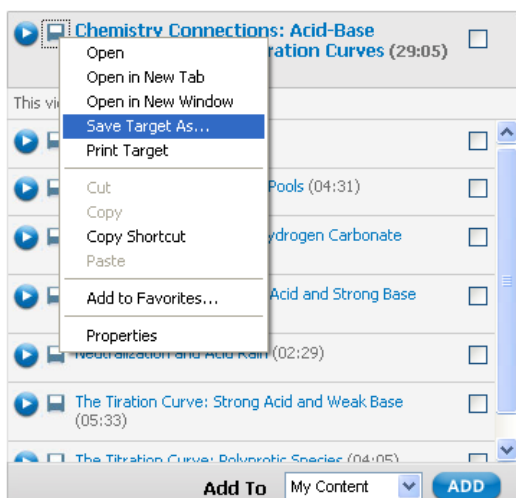

<http://streaming.discoveryeducation.com/index.cfm> (with subscription to Discovery Education/United Streaming)

<http://www.teachertube.com/>

<http://www.schooltube.com/>

<http://www.youtube.com/>

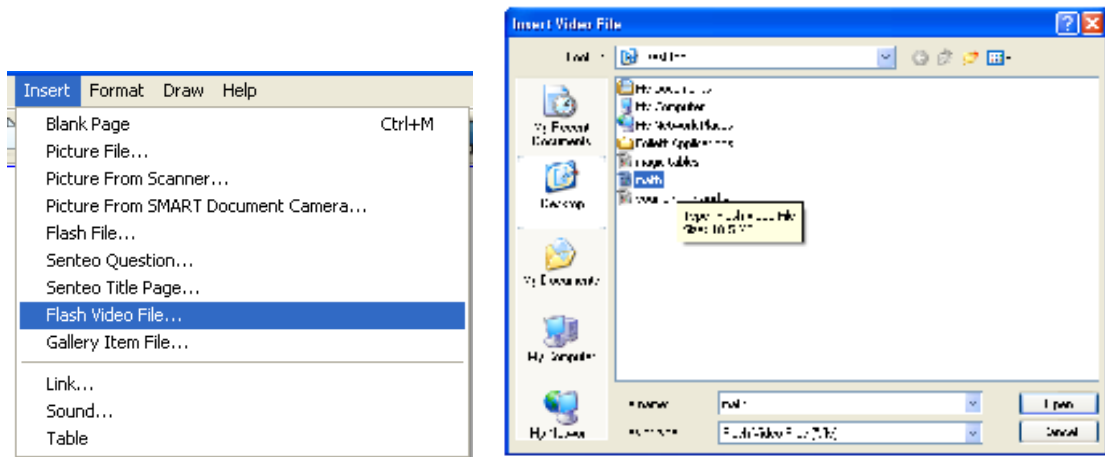

Download a United Streaming video by right clicking on the blue disk and choosing “Save Target As”.

You will need a program such as DVDVideoSoft (<http://www.dvdvideosoft.com>) to download YouTube videos. All video files must be in the .flv (Flash Video) format to embed into Notebook 10. To convert videos simply open DVDVideoSoft and choose the “Free Video to Flash Converter” option.

Once you have your video clip downloaded and converted to .flv you are ready to insert it into Notebook 10. Open Notebook and under the “Insert” menu choose “Flash Video File”. Browse for your video and select.

Your video is now on the Notebook 10 page and is ready to be played. Incorporate the video as part of a Notebook 10 lesson. Be sure to save the file for future use. You will now be able to view the video even if the Internet is down.
